

# How Grow with Jen Consulting Streamlined Projects for a High-Volume Construction Company with On2Air Forms and Airtable

“On2Air allows us to pull the information from Airtable, update the information, and send it back to Airtable.”

**Jen Rudd**  
Founder and CEO  
Grow with Jen Consulting

GROW WITH JEN

## OVERVIEW

When a construction company reached out to Jen Rudd, Founder and CEO of Grow with Jen Consulting, struggling to balance all the moving parts of their construction projects stored in Airtable, she knew she had to make the process more seamless. **On2Air Forms** was an essential tool for solving their problems.

## RESULTS

**Update Records**

**Filtered Records**

**Create Records for Multiple Tables**

**Project Dashboard**

**Limit Access**

**Prefilled Forms**

USING AIRTABLE

## ABOUT THE CLIENT

Grow with Jen is an Airtable consulting firm founded by Jen Rudd. They create data driven business solutions and help businesses reduce human capital, leverage automations, and create standard operating processes.

## CHALLENGES

The construction company was a high-volume business working on multiple construction and fabrication projects at any time. They were using Airtable to store information about each Project. Various team members needed access to only specific information for each project. They also needed project dashboards and an easy way to create and update records in Airtable.

- Multiple projects in progress at all times
- Multiple people needed access to data without being in Airtable
- Need to limit what data was displayed depending on the project stage
- Difficult to access when in the field at the job site
- No high-level overview or dashboard for all projects

## SOLUTION

Rudd and her team knew **On2Air Forms**, a form, dashboard, and page builder for Airtable, would be a great fit to customize forms for each Project stage, individual team members, and external vendors in the construction process. They were able to set up filtered views per user without being in Airtable, build forms to create estimates, projects, and inventory records, build dashboards for project overviews, prefill form fields for easier entry, all while making it simple to use on a mobile device or desktop.
